- Optional: Credit Card and Mobile Payment
- Capacity: 1.500 Coins | 300 Bank Notes
- Supports all MIFARE DESFire and LEGIC Advant Smart Cards
- Optional: Chip Card Dispenser incl. Chip Encoding

#### ► DESCRIPTION

The card recharging machine ID CHARGE 1000 is a valid all-round solution for reloading existing smart cards. Particularly in stadiums, universities or in swimming pools/wellness facilities, credit cards are used to pay for food/beverages, massages or merchandising. The card top-up device is the perfect complement to our tripod barriers. Visitors can already use the card for the access control solution and then top up their cards with credit at the machine.

To simplify the process of loading prepaid cards, the automatic card loader is ideal. By simply holding the card, the machine displays the current credit balance. The capacitive 5.7" touch screen display enables an intuitive user guidance.

Payment can be made by coin, bank notes or EC card. Payment by credit card or mobile payment is optionally available. The card recharging machine has a capacity of 1,500 coins and 300 banknotes.

The robust steel housing provides security against burglary and keeps the money safe. Concealed, secure cabling makes vandalism or manipulation of the device impossible.

Secure card technologies are supported with MIFARE DESFire and LEGIC Advant.

The Card Recharging Machine is available in 3 versions:

- Card machine for coins & banknotes
- Card machine for coins & EC Cards
- Card machine for EC Cards

Optionally, the automatic card loader is available with a chip card dispenser including chip encoding with a magazine of over 250 cards.
