

# Application

## ID SAUNA MASTER

### Description

Our ID SAUNA MASTER consists of a WiFi/WLAN people counter with a light barrier and the modern ID INFO 3000 display terminal.

The application is ideal for controlling the utilization of access areas, such as in the sauna, gym or spas.

Thanks to two integrated sensors, passages are recorded in both directions and thus both incoming and outgoing persons.

The recorded count of people present is transmitted via WiFi and displayed in by a traffic light system on our ID INFO 3000 terminal.

The person limit and other parameters can be individually set in a web interface.

### DISPLAY ON THE TERMINAL ID INFO 3000

Green displayed as long as capacities are still free in the monitored access area

When the maximum load is reached, the indicator display automatically switches

### HIGHLIGHTS

- Easy set-up via Plug & Play (video tutorial provided)
